

After many months of testing and evaluations at their facilities, this large chemical company specified the use of **CHEMCLAD XC** to protect their new **Mono-Nitrate Benzene and Aniline plant** in Texas.

This \$160,000 CHEMCLAD project will protect the concrete

surfaces from the many aggressive chemicals that are manufactured and processed at this plant for many years to come.

Brien Neill, Sales Director for ENECON's Gulf Coast Division, teamed up with the ENECON Field Engineer in Texas to secure the project.

ENECON provided complete turn-key project management services insuring single source responsibility and accountability.

Major Chemical Plant Specifies CHEMCLAD XC to Protect Concrete Containment Areas at New Facility in Texas
